ART UNIT

PAPER NUMBER

2834

DATE MAILED: 03/28/2002

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application N .

09/778,338

Applicant(s)

ADAEDA ET AL.

Examiner

Dang D Le

Art Unit

2834

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 07 February 2001 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

### Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☒ All b) ☐ Some \* c) ☐ None of:  
1. ☒ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  
\* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).  
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_ 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "electrical range of 120° to 140°" recited in claim 7 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to because they do not clearly show features of the claimed invention especially Figures 5 and 6 in which many words cannot be recognized. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

3. Claim 1 is objected to because of the following informalities:

- Claim 1, line 1, replace "magnet" with – magnets --.
- Claim 2, line 1, replace "plate" with – plates --. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 2834

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 7-11 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Regarding claim 7, It is not clear what "the electrical angle" in the range of 120 degrees to 140 degrees is. The Figures do not clearly show the feature.

Regarding claim 8, it is neither clear how "the magnet electrical angle" is "equivalent to the length of time a magnetic pole travels two pole pitches which is equivalent to the length of time the electromotive force (voltage) completes one cycle."

Other claims are dependent claims.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, it is not clear what "changing pluralities" shown in lines 1 and 2 are.

Moreover, there is insufficient antecedent basis for the following limitations in the claims. Claim 5 recites the limitations "the partially punched openings" in line 1 and "the

Art Unit: 2834

stator core" in line 2. Claims 7 and 8 recite the limitation "the magnet electrical angle" in line 1.

Other claims are dependent claims.

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claims 1, 3, 4 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchiyama in view of Neumann.

Regarding claim 1, Uchiyama shows a rotating machine (Figures 1a and 1b) having a plurality of permanent magnet (8) having changing pluralities in a circumferential direction at regular intervals and a relatively rotatable associated element (11) having a plurality of armatures (15) around which coil windings (16) are

Art Unit: 2834

formed, the armatures are formed from a lamination of a plurality of electromagnetic steel plates.

Uchiyama does not show the electromagnetic steel plates having a thickness in the range of 0.25-0.65mm.

Neumann shows electromagnetic steel plates having a thickness in the range of 0.36-0.64mm (column 4, lines 25-28) for the purpose of providing a high strength motor with minimum flux leakage.

Since Uchiyama and Neumann are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use the electromagnetic steel plates having a thickness in the range of 0.25-0.65mm to make a stator core as taught by Neumann for the purpose discussed above.

Regarding claim 3, it is noted that Uchiyama also shows the machine comprising an electrical generator.

Regarding claim 4, it is noted that Uchiyama also shows the permanent magnets rotating and the coil windings fixed against rotation.

Regarding claim 6, it is noted that Uchiyama also shows an insulating layer (plates being coated) being fixed to at least one surface of each of the electromagnetic steel plates.

11. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Uchiyama in view of Neumann as applied to claim 1 above, and further in view of Yamamoto.

Regarding claim 2, the rotating machine of Uchiyama modified by Neumann includes all of the limitations of the claimed invention except for the electromagnetic steel plate interlocked relative to each other by series of partially punched openings forming holes and projections, which inter-fit with each other so as to line up the electromagnetic steel plates in relationship to each other and to provide a mechanical coupling there between.

Yamamoto shows the electromagnetic steel plate interlocked relative to each other by series of partially punched openings forming holes (9a) and projections (9), which inter-fit with each other so as to line up the electromagnetic steel plates in relationship to each other and to provide a mechanical coupling there between for the purpose of making an armature core.

Since Uchiyama, Neumann and Yamamoto are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to interlock the electromagnetic steel plates relative to each other by series of partially punched openings forming holes and projections, which inter-fit with each other so as to line up the electromagnetic steel plates in relationship to each other and to provide a mechanical coupling there between as taught by Yamamoto for the purpose discussed above.

Art Unit: 2834

12. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Uchiyama in view of Neumann as applied to claim 1 above, and further in view of Nose.

Regarding claim 5, the rotating machine of Uchiyama modified by Neumann includes all of the limitations of the claimed invention except for the partially punched openings forming holes and projections provided in each tooth of the stator core.

Nose shows the partially punched openings forming holes (14) and projections provided in each tooth of the stator core (Figure 4) for the purpose of making an armature core.

Since Uchiyama, Neumann and Nose are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide the partially punched openings forming holes and projections in each tooth of the stator core as taught by Nose for the purpose discussed above.

13. Claims 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchiyama in view of Neumann as applied to claim 1 above, and further in view of Miyao.

Regarding claim 7, the rotating machine of Uchiyama modified by Neumann includes all of the limitations of the claimed invention except for the magnet electrical angle of the poles of the permanent magnets being set with respect to the rotational axis to be in an electrical range of 120° to 140°.

Miyao shows the magnet electrical angle of the poles of the permanent magnets being set with respect to the rotational axis to be in an electrical angle of  $120^\circ$  for the purpose of reducing cogging torque.

Since Uchiyama, Neumann and Miyao are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to set the magnet electrical angle of the poles of the permanent magnets with respect to the rotational axis to be in an electrical range of  $120^\circ$  to  $140^\circ$  as taught by Miyao for the purpose discussed above.

Regarding claim 8, it is noted that Miyao also shows the magnet electrical angle being equivalent to the length of time a magnetic pole travels two pole pitches which is equivalent to the length of time the electromotive force (voltage) completes one cycle.

Regarding claim 9, it is noted that Uchiyama also shows the machine comprising an electrical generator.

Regarding claim 10, it is noted that Uchiyama also shows the permanent magnets rotating and the coil windings fixed against rotation.

14. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Uchiyama in view of Neumann and Miyao as applied to claim 10 above, and further in view of Yamamoto.

Regarding claim 11, the rotating machine of Uchiyama modified by Neumann and Miyao includes all of the limitations of the claimed invention except for the

Art Unit: 2834

electromagnetic steel plate interlocked relative to each other by series of partially punched openings forming holes and projections, which inter-fit with each other so as to line up the electromagnetic steel plates in relationship to each other and to provide a mechanical coupling there between.

Yamamoto shows the electromagnetic steel plate interlocked relative to each other by series of partially punched openings forming holes (9a) and projections (9), which inter-fit with each other so as to line up the electromagnetic steel plates in relationship to each other and to provide a mechanical coupling there between for the purpose of making an armature core.

Since Uchiyama, Neumann, Yamamoto and Miyao are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to interlock the electromagnetic steel plates relative to each other by series of partially punched openings forming holes and projections, which inter-fit with each other so as to line up the electromagnetic steel plates in relationship to each other and to provide a mechanical coupling there between as taught by Yamamoto for the purpose discussed above.

***Information on How to Contact USPTO***

15. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dang D Le whose telephone number is (703) 305-0156. The examiner can normally be reached on Monday through Friday.

Art Unit: 2834

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on (703) 308-1371. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7382 for regular communications and (703) 308-7382 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1782.
